

# European Association of Fellows in Wound Healing International Wound Healing Programme

The EAFWH Wound Healing Programme ensures that physicians involved in wound management have a sufficient level of expertise to provide efficient and safe treatment of their patients. The EAFWH programme is also a unique opportunity to become part of a multidisciplinary and multicultural network of medical doctors from all over the world.

To optimise the treatment of patients with chronic wounds, physicians must be able to select therapy appropriate to the underlying aetiology as well as the correct local therapeutic measures.

The programme includes the fundamentals of the medical field of wound healing, as well as information on the different pathogenetic causes of chronic wounds, clinical assessment, development of therapeutic concepts, wound prevention, and

collaboration with other specialists, nurses, and health care providers dealing with this patient population.

Wound healing education programmes organised by the EAFWH are based on the curriculum approved by the European Union of Medical Specialists (UEMS) Multidisciplinary Joint Committee of Wound Healing (MJC-WH).

**Education programme graduates are awarded the title European Fellow of Wound Healing.**

EAFWH fellows are invited to engage in the future development of the EAFWH association.

The EAFWH international educational programme is being organised in English.
