

## European Association of Fellows in Wound Healing International Wound Healing Programme

The EAFWH Educational Wound Healing Programme ensures that physicians involved in wound management have the necessary level of expertise to provide efficient and safe treatment for their patients. The programme is also a unique opportunity to become part of a multidisciplinary and multicultural network of medical doctors from all over the world.

To optimise the treatment of patients with chronic wounds, physicians must be able to select therapy appropriate to the underlying aetiology, as well as the correct local therapeutic measures.

The programme includes the fundamentals of wound healing, as well as information on the different pathogenetic causes of chronic wounds, clinical assessment, the development of therapeutic concepts, wound prevention,

and collaboration with other specialists, nurses, and healthcare providers dealing with this patient population.

Wound healing education programmes organised by the EAFWH are based on the curriculum approved by the European Union of Medical Specialists (UEMS) Multidisciplinary Joint Committee of Wound Healing (MJC-WH).

**Graduates of the programme are awarded the title of European Fellow of Wound Healing.**

EAFWH fellows are invited to engage in the future development of the EAFWH association.

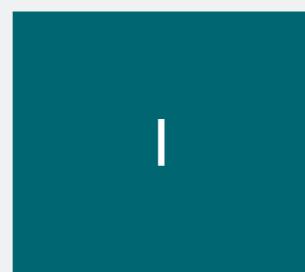

The EAFWH international educational programme is conducted in English
